

## GIB® FIRE RATED SYSTEMS

The New Zealand Building Code requires fire safety systems to reduce the risk of injury or death, and to protect adjacent property in a fire situation.

Fire rated systems require attention to the details in the GIB® Fire Rated Systems literature.

Deviating from these specifications can invalidate the system leading to expensive remedial work to comply or increased risk in case of fire.

A fire system is NOT simply a matter of fixing GIB Fyrelite® instead of another GIB® plasterboard.

The fire resistance rating can only be assured when the board has been installed strictly in accordance with the relevant instructions in the GIB® Fire Rated Systems literature.

**For complete system and construction details refer to the publication entitled GIB® Fire Rated Systems.**

## GIB ULTRALINE® PLUS LINING SYSTEM

The GIB Ultraline® PLUS Lining System is a complete system that combines best practice installation techniques and a range of high specification GIB® products to help ensure a superior finish.

The system has been specifically designed and tested to deliver a consistently high standard finish in line with the expectations of discerning customers. At the same time it delivers mandatory code performance such as bracing and desired performance such as noise control.

Central to the system is the use of 13mm GIB Ultraline® PLUS plasterboard on walls and ceilings. The system requires 13mm GIB Aqualine® to be used in wet areas.

**For complete system and construction details refer to the publication entitled GIB Ultraline® PLUS Lining System.**
