

**Suspended Ceiling to Wall Junctions** JANUARY 2006

The junctions below are approved for joining vertical fire separations to fire rated suspended ceiling systems such as suspended grid and the GIB Clip® systems shown below.

GBS/GBSL Systems OR  
GBT/GBTL Systems.

Fire wall may extend from floor to floor or may extend only to the ceiling junction as shown. Wall-ceiling junctions without cavity barriers in the concealed space do not comply with C3/AS1 (Section 7.0) but may be potentially included in an alternative solution.

**Wall/Ceiling Junctions**

The internal angle between the ceiling and walls must be protected by GIB-Cove® adhered with GIB-Cove® Bond, or boxed corners (square stopped) filled and taped in accordance with the publication entitled "GIB® Site Guide".
