

GIB® New GIB LiteSet® 15 - 5kg

Ideal for quickly patch/repair work or to fill gaps and holes.

- A basecoat suitable for bedding tape and can be the finishing coat.
- Better suited to fill larger gaps or holes compared to ready mixed compounds as it chemically hardens after 15 minutes regardless of drying conditions.
- The next coat can be applied after 30 minutes.
- It is a sandable, easy to scrape and paintable when dry.
- It can be worked while green and has minimal shrinkage.
- It comes in a convenient 5kg bag.
- Like the other GIB LiteSet® compounds, it is easy to apply with its slick flow using a trowel or box, dries fast due to its low water demand, has a stable viscosity/thickness during the working time, and thickens up near the very end of the working time to warn it will soon set/harden.

Try this new GIB® compound today.
Available at your local GIB® compound stockists.

New GIB® compounds are developed after lots of feedback and trials with stoppers. Please share your user feedback with us, it is much appreciated and invaluable for us to keep delivering quality compounds to you.
