

NELSON PLASTERBOARD RECYCLING SERVICE

Waste Management NZ has partnered with a leading Nelson compost and landscaping company to provide an environmentally sustainable recycling option for most types of plasterboard offcuts.

Nelson based building sites can now order 'plasterboard only' bins from Waste Management with the plasterboard offcuts removed from site, crushed and screened to allow the gypsum contained within the plasterboard to be reused in a range of compost and agricultural products used throughout the South Island.

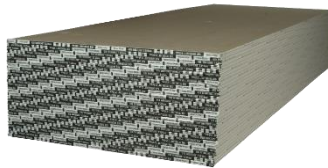

This service diverts plasterboard out of our landfills, which is better for the environment and assists with your waste diversion points through the Homestar and Greenstar programs.
