

Why do drying times for compounds differ?

As we move into a new season, just a quick reminder that drying times for compounds differ depending on temperature. As conditions change, compounds become harder or softer to sand.

The GIB Trade Finish® range ensures a product is available that has similar trowelling properties through the range, but different sanding characteristics to suit different seasons/drying conditions.

The warmer the weather, the harder the product will become to sand.

The colder the weather, the softer the same product will become to sand.

Download the 'Case Study' document or contact the GIB® Helpline on 0800 100 442 for further information.
